

Marketplace Use Cases...

Valorisation of energy-consumption data

Valorisation of water-related data

Urban bike mobility planning

Mobility Digital Twin

1st October 2022

30th September 2025

Total cost
€ 5.25 millions

EU contribution
€ 4.4 millions

SEDIMARK aims at designing and prototyping a secure decentralised and intelligent data and services marketplace that bridges remote data platforms and allows the efficient and privacy-preserving sharing of vast amounts of heterogeneous, high quality, certified data and services supporting the common EU data spaces.

SEDIMARK project is funded by the European Union under the Horizon Europe framework programme (grant number 101070074). It is also partly funded by UK Research and Innovation (UKRI) under the UK government's Horizon Europe funding guarantee (grant number 10043699).

SECure Decentralised Intelligent data MARKetplace

1 User tools to manage all the interactions within a data marketplace on a trustworthy, effective and user-friendly manner.

Ready-to-use toolbox to enable data and AI services exchange leveraging open standards and the Data Spaces concept.

3 Integration of Federated Learning services leveraging the datasets that each Provider is making available on the Marketplace without actually sharing the data.

Straightforward creation of data processing pipelines to boost the value and quality of the data and AI assets that Prosumers find at the SEDIMARK Marketplace.

5 Standards-based Marketplace Information Model covering the fundamental concepts of SEDIMARK for the registration, discovery and exchange of offerings and assets.

Decentralized and trustworthy at its core through employing IOTA Tangle DLT network and Smart Contracts as baseline for participants and assets interactions.
